

Costing - Generate costing reports with assigned cost-per-minute values. Costing rates can be assigned to area codes, trunks or trunk groups for incoming and outgoing calls (7 digit, 10 digit and international numbers are supported).

Review and Organize Data - Export reports to Adobe® as well as Microsoft® Excel.

Simultaneous Users - There is no limitation on concurrent users, beyond those imposed by the web server and database.

Detailed call flow breakdown lets you customize your reports. Apply filters to limit a report to calls that occurred during a specific time frame, to a specific station or trunk group, or from certain telephone numbers.

AccuCall-Web Advanced* includes all the features as AccuCall-Web Standard, and also includes the additional reporting options:

- Supports multiple transfers
- Reports differentiate between transfer and conference
- ACD and ICM call information displayed
- DNIS information displayed
- Trunk busy statistics
- Cradle-to-Grave reporting

*Accucall-Web Advanced does not support reporting based on account codes. Accucall-Web Advanced is pending release.
